

## **What is canine flu and why we require it for boarding**

- 1) CIV (or Canine flu) is highly contagious and can be difficult to diagnose and potentially difficult to treat.
- 2) A dog may have the flu virus and not show any symptoms until later. Meaning (unbeknown to you) it is spreading to every dog it meets.
- 3) In some cases, symptoms can be severe, including moderate nasal discharge, coughing, sneezing, depression, retching, labored breathing and fever.

The Vet Wellness Center of Green's #1 priority is the health of your dog and any dog that enters our facility. This is why we require the CIV vaccine for both strains of the dog flu.

You can schedule your boarding appointment by calling 234-755-WOOF.
